ENVIRONMENTAL CONSERVATION, MS

The Nelson Institute's professional programs offer environmental leadership training in areas of identified and emerging need across our sector, convening people and perspectives from around the world and equipping graduates with the necessary environmental knowledge to tackle their next career challenge. We have two professional master's programs. Within the Environmental Conservation master of science degree, students can select a named option in either Environmental Conservation (https://guide.wisc.edu/graduate/environmental-studies/environmental-conservation-ms/environmental-conservation-environmental-conservation-ms/) or in Environmental Observation & Informatics (https://guide.wisc.edu/graduate/environmental-studies/environmental-conservation-ms/environmental-conservation-environmental-observation-informatics-ms/).

The curriculum in our professional programs is designed in close consultation with leaders in environmental practice to meet emerging global challenges and demands. The accelerated 15-month curriculum culminates in a final leadership project with a partner organization. Upon degree completion, graduates will receive an MS in Environmental Conservation with a named option in one of the above.
