

PHYSICS, CERTIFICATE

An understanding of the physical universe informs many disciplines. The study of physics is essential to understanding nature and to advancing technology. A certificate in Physics increases the opportunities for students to become better informed on technological issues at the local, state, national, and international levels.

The certificate is designed to serve students majoring in biological fields, Chemistry, or Mathematics, Engineering, Education and other fields who wish to extend their study of physics beyond what may be required or recommended for their major.
